

Alcohol and Violent Crime

April 2018

Reducing alcohol consumption is key to violence prevention, due to the strong association between alcohol consumption and an individual's risk of becoming a perpetrator or victim of violence.¹ As well as having an often devastating impact on people's lives, alcohol-related crime is estimated to cost Scotland £727 million each year.² Alcohol-related violence is not limited to the night-time economy: almost three quarters of alcohol is sold in shops and supermarkets for consumption at home.³

With more violence occurring behind closed doors rather than in public places and the difficulties associated with policing the private sphere, primary prevention measures are vital.⁴ The best ways to reduce alcohol consumption and harm are to increase the price, reduce the availability and restrict the marketing of alcohol.¹¹ For example, introducing a minimum unit price of 50p per unit of alcohol will prevent an estimated 3,500 crimes in Scotland each year, including around 500 violent crimes.⁵

There is a strong link between alcohol and violent crime.

42% of violent crime in Scotland is alcohol-related.⁶ While there has been a decrease in the number of alcohol-related violent crimes in Scotland over the past five years or so, **dropping from 63% in 2008/09 to 42% in 2016/17**, almost **100,000 alcohol-related violent crimes** still take place in Scotland each year.⁶ In addition:

Over two fifths of violent crimes in Scotland are alcohol-related¹⁰

- The Scottish Ambulance Service attended **over 1,000 emergency incidents relating to alcohol-related violence** in 2016-17.⁷
- **One third** of police, ambulance and fire service staff have been **subjected to physical abuse** while attending an incident as a result of alcohol.⁸
- **42% of all people accused of homicide** over the last ten years were under the influence of alcohol.⁹
- **Two in five (41% of) prisoners** report being drunk at the time of their offence¹⁰, rising to **60%** for young offenders.¹¹

Scotland's prison and custody populations have a high prevalence of alcohol problems:

- **1 in 5 young male offenders got drunk** daily before being imprisoned.¹⁰
- Between **18-34% of those in police custody have alcohol problems** (mostly at the dependency end of the spectrum).¹²
- Nearly **three quarters (73%) of male prisoners have an Alcohol Use Disorder** with 36% possibly dependent.¹³

Victims of violent crime are also often under the influence of alcohol:

- In 22% of violent crime, **the victim** had been drinking.⁶

More crime occurs in areas where alcohol is readily available

Alcohol availability refers to the ease or convenience of obtaining alcohol. This includes the number and capacity of alcohol outlets in an area (both on-sales such as pubs and restaurants and off-sales such as supermarkets and shops), and opening hours of premises selling alcohol.

Research has found a consistent relationship between alcohol availability and violence.¹⁴ In particular, the concentration of premises selling alcohol in an area (**'outlet density'**) has been found to be associated with higher levels of alcohol-related crime¹⁵, domestic violence and murder.¹⁶

The **type of premises** is also important in relation to levels of alcohol-related crime, with more violence found to be linked to off-premises than on-premises in two studies¹⁷, and bar density more strongly associated with rates of assault than restaurant density.¹⁸

The **hours during which alcohol is sold** also affects rates of alcohol-related crime, with late night trading hours associated with higher assault rates¹⁹, and a reduction in assault rates resulting from cutting pub late night opening by two hours in an Australian city.²⁰
